Well, that wasn't too hard. I guess you just reused a repeat block repeat three. But of course because we've put it in a block now we can also do it five times. Or ten times. Like this now we just get ten lines, I'm not going to wait for it, but you see where this is going. We get ten lines.

Now if you've inspected the Mondriaans, you know that the lines aren't only this direction, they're also from top to bottom. So your next programming assignment is to create your own block, like this one, but then for a vertical line. And remember it's very important that we practice in the beginning to inspect this block and to see what is the same and what is different? If we're making a line this way, what needs to change? The direction needs to change, maybe the position where we will start needs to change, where we go from there. But also the number of steps. Think clearly try it out and create your own block. And then I would like to see three lines this way and three lines that way. Or maybe four maybe five. It's your artwork, as long as I get vertical lines and horizontal lines.
